Product Differentiation

1. Shopping cart

- Users can add items to their shopping carts
- Users can delete items from their shopping carts
- Users can use a checkbox to make purchases in shopping cart page
- Users can edit the quantity of items to purchase in shopping cart page

2. Seller registration

- Any authenticated user can register as a seller
- Seller will have a listed items page, displaying all products they are selling
- Sellers have a page to list items to sell

3. Search

- Searching items supports rough search instead of exact match

4. Buit-in data

- We initialize sellers, items and warehouses

5. Best warehouse match

- We match the closest warehouse to the destination for order delivery

6. Comments

- We allow buyers to make comments on all items that belongs to a delivered order
- Comments are displayed in the items detail page

7. Item detail view

- For each item listed, we have an associated image for better product display
- Item detail view contains comments from previous buyers
